                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises an immunogenic composition for the treatment oprevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful freating or preventing chlamydial infection. The present amino acid sequence represente a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.

                                                                                                                                                                                                    The invention comprises an immunogenic composition for the treatment or prevention of a chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful for treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.

for protein or treating or ö The invention comprises an immunogenic composition for the treatment oprevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was New immunogenic composition comprising Chlamydia trachomatis its encoding nucleic acid, useful for immunizing against, or chlamydia trachomatis infection; antibacterial; vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydial trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                      New immunogenic composition comprising Chlamydia trachomatis its encoding nucleic acid, useful for immunizing against, or preventing chlamydial infection.

The invention relates to an isolated Chlamydia species high molecular weight (HMM) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salphngitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and disagnosis. The present sequence represents a C. trachomatis HWW protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           921

                                                                                                   The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SBDs-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia a.g. Dacterial infection, conjunctivitis, urethritis, lymphogranuloma venerum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and disanosis. The present sequence

                                                                                                                                                                                      for preventing pelvic tract infections,
                                                                                                                                                                                                                                    The present sequence is provided in a specification relating to compoun and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunospent portions of Chlamydia antispens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TTTTCCAATTGCAATTCATTACTTGCCGTACTCCCTGCTGCTGCAACGACTAATAAGGGTAGC

Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia-specific T-cell response or inhibiting the development of a Chlamydia infection in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chlamydial infection; Chlamydia; vaccine; detection; diagnosis; antigen; antibacterial; immunostimulant; immune response; Chlamydia-specific T-cell response.

The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis and infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and correct interest in the particular in the particular sequence is a protein isolated in the

The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease

Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia infection in an animal. Methods from the present invention can be used: for eliciting response or inhibiting the development of a Chlamydia infection in an animal. Methods from the present invention can be used: for detecting the spresence of Chlamydia protein; to stimulate and/or expand T cells specific for a Chlamydia protein; and for treatment of a Chlamydia infection. ABL92194 to ABL92709 and ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .,
                                                                                                                                                                                                                                      The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also chought to play a role in the pathogenesis of atherosclerosis and coronary heart disease. The present sequence is a protein isolated in the

for diagnosing or treating Chlamydial infections, particularly as vaccines for treating or preventing Chlamydial infections, e.g. pelvic inflammatory disease.

Claim 2; SEQ ID NO 169; 275pp; English

The present invention describes compounds and methods for diagnosing and treating Chlamydial infection. Chlamydia polymucleotide and protein sequences have antibiotic, antiinflammatory, antiinfertility, cardiant, antianteriosclerotic and ophthalmological activities, and can be used in containt and in gene therapy. The Chlamydia polymucleotides, proteins, compositions or methods from the present invention can be used for the compositions or treatment of Chlamydial infections, particularly in humans. The polymucleotides, proteins or compositions are particularly to useful for stimulating an immune response in a patient, or for stimulating and/or expanding T cells specific for a Chlamydial protein. Specifically, the polymucleotides, proteins or compositions are useful as vaccines for treating or preventing Chlamydial infections including to pelvic inflammatory disease (which results in tubal obstruction and infertility in women), male infertility, ocular infection (which may cause blindness), acute respiratory tract infections, atherosclerosis, or exemplification of the present invention.

Sequence 670 AA;

The polysptides can be used as vaccines against Chlamydia trachomatis. Antisense and riboxyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonnedemic trachoma, and inclusion conjunctivitis; genital diseases such as paratrachoma, and inclusion conjunctivitis; genital diseases such as perihapatitis, bartholinitis, pedidymitis, carycictis, salpingitis, perihapatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
The invention relates to an isolated Chlamydia species high molecular weight (HMM) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingits, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence represents a C. trachomatis HMM protein fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  645
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   885
                                                                                                                                                                                                                                                                                                                                                                                                                                                    585

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100
                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWM proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic infiammatory disease (PID), allpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. Sequences AAY16740-Y16752 represent Chlamydia HWM protein fragments
                                                                           PID;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HMW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cerricitis, epididymitis, endometritis, pelvic inflammatory disease (PID), aslpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and disgnosis. Sequences AAX16740-Y16752 represent Chlamydia HMW protein fragments
                                       Chlamydia; high molecular weight protein; HWW protein; urethritis; bacterial infection; conjunctivitis; lymphogranuloma venereum; LGV; cervicitis; epididymitis; endometritis; pelvic inflammatory disease; PID; salpingitis; tubal occlusion; infertility; cervical cancer; arteriosclerosis; atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                   AAY36754-Y17949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01415). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye paratrachoma, and inclusion conjunctivitis; genttal diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, verifications, and inclusion conjunctivitis; salpingitis, as perihapatitis, bartholinitis; pueumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   204
                      The present sequence is provided in a specification relating to compoun and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunospenic portions of Chlamydia antispens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             285 IlePheTrpAspAsnSerValGlyTyrSerProLeuSerlleValProAlaSerThrPro

Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia infection in an animal. Methods from the present invention can be used: for electing the present invention can be used: for detecting the presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells
                                                                                                                                                                                                                                                                                                                                                                  462

                                                                                                                       442
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide for treating Chlamydia infections encodes a
polynucleotides containing an immunogenic portion of a Chlamydia antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polymucleotide encoding at least a partial Chlamydia protein which is an antigenic fragment, or the complements, fragments, homologues and wariants, and antibodies raised against the antigenic proteins (or fragments). The nucleic acids, proteins and antibodies are used to diagnose and treat Chlamydia infections (e.g. a sexually transmitted disease, pelvic inflammatory disease (PID), acute respiratory tract infection, trachoma, atherosclerosis and coronary heart disease) in a patient, and in the treatment of male infertility. The compounds of the invention are also useful for detecting the presence of Chlamydia in a patient, and stimulating and/or expanding T cells specific for a Chlamydia protein. The present sequence represents a Chlamydia antigen. (Updated on 11-SBP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new gram-negative bacterial bleb presenting on its surface the PorB outer membrans protein from Chlamydia trachomatis, or a protective antigen from C. pneumoniae. The invention is useful for preventing C. trachomatis or C. pneumoniae infection in a host. The present amino acid sequence represents a Chlamydia trachomatis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20

treating Chlamydial infection. Chlamydia polymucleotide and protein creating Chlamydial infection. Chlamydia polymucleotide and protein sequences have antibiotic, antinilammatory, antiniertility, cardiant, sequences have antibiotic, antinilammatory, antiniertility, cardiant, cantiartriosclerotic and ophthalmological activities, and can be used in vaccines, and in gene therapy. The Chlamydia polymucleotides, proteins, compositions or methods from the present invention can be used for the serodiagnosis or treatment of Chlamydial infections, particularly in thumans. The polymucleotides, proteins or compositions are particularly useful for stimulating and/or expanding T cells specific for a Chlamydia protein. Specifically, the polymucleotides, proteins or compositions are useful as vaccines for treating or preventing Chlamydial infections including pelvic inflammatory disease (which results in tubal obstruction and infertility in women), male infertility, coular infections including cause blindness), acute respiratory tract infections, atherosclerosis, or cononary heart disease. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New DNA and proteins comprising a portion of a Chlamydia antigen, useful for diagnosing or treating Chlamydial infections, particularly as vaccines for treating or preventing Chlamydial infections, e.g. pelvic inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes compounds and methods for diagnosing and
